

The FCC's ideas, however well intentioned, are disastrous in practices. America is used to be a place of freedom, liberty, and justice for all. NPRM 02-230 will only aid in the reduction of such freedoms. Innovators such as Bell and Edison would roll over in their graves at such an injustice as NPRM 02-230 would create. It would force great minds to subjugate themselves to intellectual enslavement of various company's that only seek to further their bottom line. It takes the power away from the people to gives it to those who can buy access. In this case it would be access to other peoples privacy.

I ask, as a citizen of the United States of America, that the FCC would not bring about this regulation that can only harm the nations liberty. This is a great country but the precedent that would be set by NPRM 02-230 would lead down a path that changes the character, freedom, and liberty of its government. So please do not act upon this.
